

APPENDIX B
MESOHABITAT TYPING OF MAIN TRIBUTARIES ABOVE OROVILLE DAM

Preliminary Information – Subject to Revision – For Collaborative Process Purposes Only

Oroville Facilities Relicensing Team

Month Day, Year

N:\RAID1\Geo\PROJECTS\FERC_Upstream\ProgressReport--2003-04\APPENDIX B--MesohabitatTyping.doc

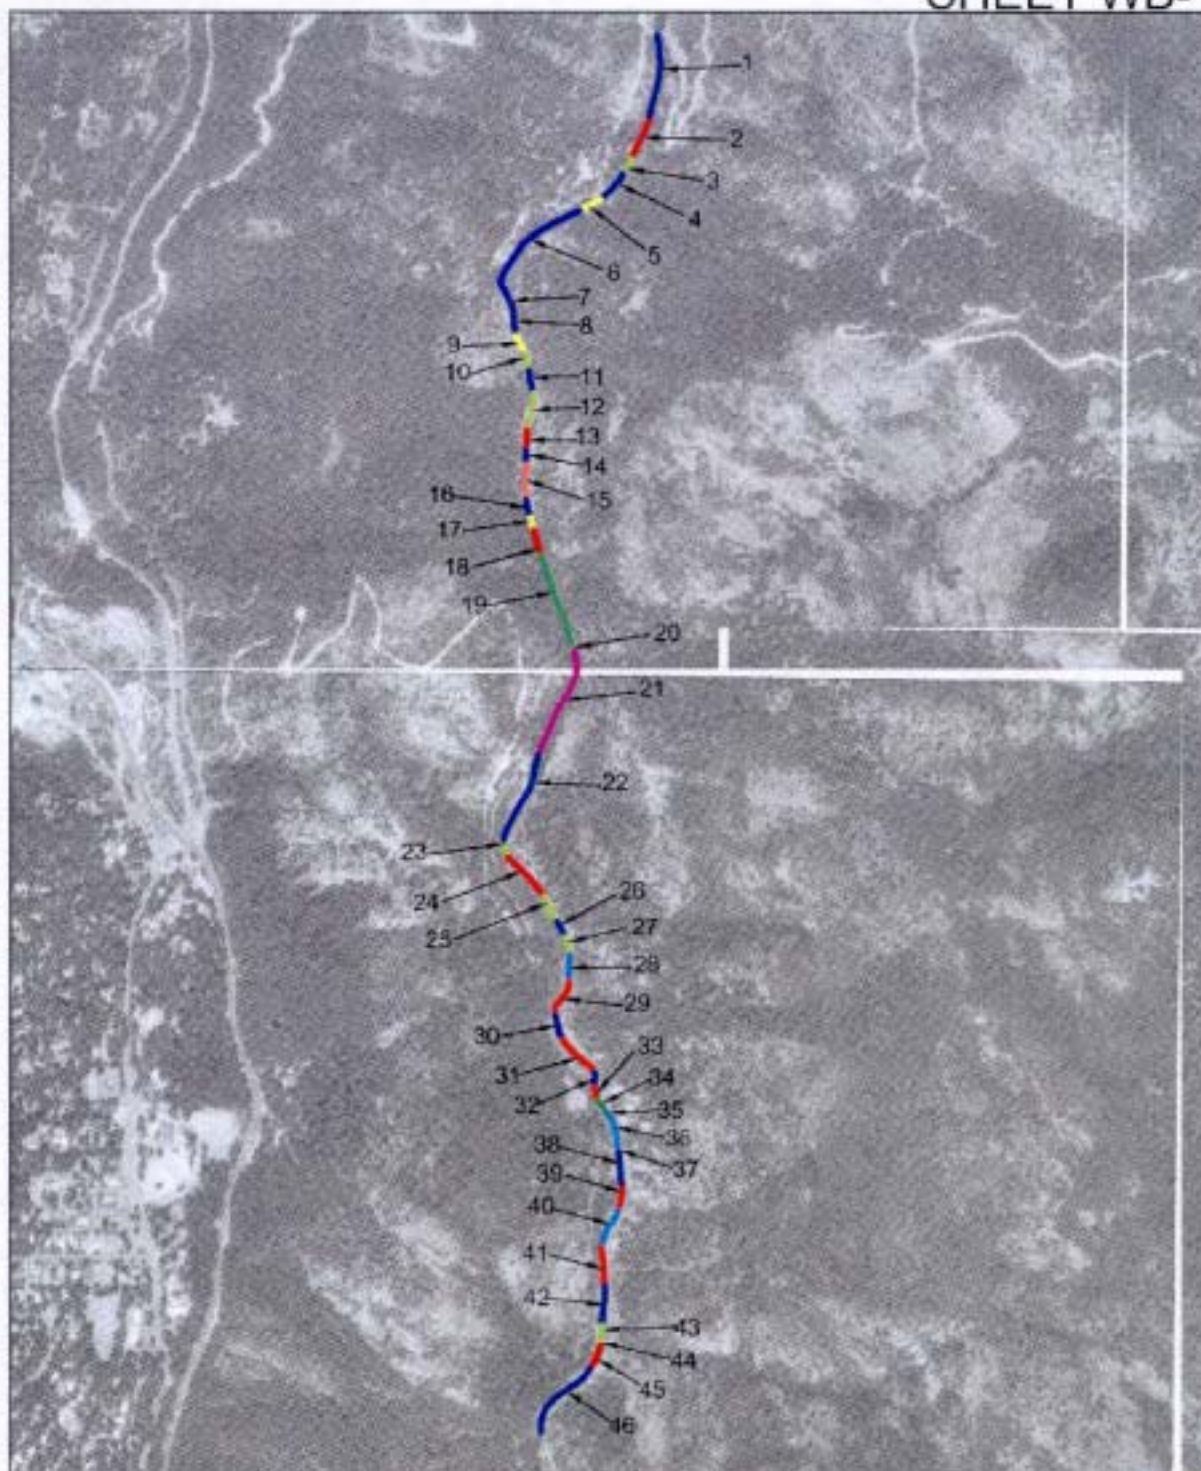

This appendix contains mesohabitat typing maps of the main tributaries above Oroville Dam to the first fish passage barrier for each tributary. Mapping included tributary reaches within the fluctuation zone (i.e. from 640' elevation to 900' elevation).

Each map sheet is presented twice with different backgrounds:

- 1) 7 ½" quadrangle sheets.
- 2) Digital Orthorectified Quarter Quads (DOQQs).

Table 1 contains information regarding each section of reach. Lengths are tabulated for all reaches. When mesohabitat typing was developed based on field hiking, additional fields (width, average depth, substrate type, spawning gravel quality, and cover code) were also noted.

Several map sheets have no habitat typing shown on them at this time; they are included to maintain the graphical continuity of the river reach.
